<b>Business outline /Products</b>						<b>Customers / Suppliers</b>						
Proposing labor-saving of production facilities and factory automation						SANKO Co., Ltd., KMEW Co., Ltd., Nichiha Corporation, NGK, Murata Manufacturing Co., Ltd., etc.						
<b>Overseas office</b>						<b>Overseas transaction</b>			Yes			
<b>Selling points</b>												
We are a group of factory automation professionals specialized in labor-saving and optimization of production facilities, including the existing material handling equipment at the World Heritage Tomioka Silk Mill and the development test jigs for a leading-edge company.												
<b>Technology / Product details</b>												
We design and manufacture material handling equipment, special purpose devices, jigs and production lines as a robot sler. Our integrated in-house system covers support to give shape to requirements, machine design, electric control design, canning, assembly, trial runs, installation, launch adjustment, modification, repair and maintenance. We combine the know-how that we have accumulated for 75 years from our foundation and 50 years from our establishment with the latest technologies, such as robot and image control, to propose the optimization of customers' facilities. We design the proposed machinery, including electric control, in-house. In our 1,500 m <sup>2</sup> assembly factory, we conduct canning and assembly as well as trial runs by reproducing the layout at the customer's site. In addition to installation and adjustment of the facility for launch for the customer, we can manage the troubleshooting and modification all by ourselves.
